EDUCATION

Georgia Institute of Technology

Bachelor of Science in Computer Science; GPA – 3.56

National Merit Corporate Scholarship Recipient, Raytheon-sponsored, Awarded 2022

Atlanta, GA

May 2026, Expected

EXPERIENCE

Software Engineer Intern

Wealth.com

Remote

August 2024 - Present

- Implemented the frontend for a 6-page responsive workflow featuring user sign-up, document uploads, a custom PDF viewer, and OTP email verification.
- Assisted the company's Series A \$30M Funding Round announcement on the corporate website by developing 6+ responsive Sanity components with React.
- Consolidated the codebase by building the internal icon library and updating all usage throughout the application.

Frontend Software Engineer Intern

KnoWhiz

Remote

June 2024 – August 2024

- Solo developed a 7-page landing site for the “Crafty” lecture generation feature with React.js and Next.js.
- Delivered the landing site overhaul and used CSS to increase interactivity with new/improved animations.
- Built responsive tutorial and tooltip components for 5 user onboarding flows, using Redux slices for global state management and fetching backend data to track user-specific progress.
- Designed and implemented the frontend for the updated feedback flow in the web application.

PROJECTS

PopSign

Georgia Institute of Technology

Atlanta, GA

September 2024 – Present

- An educational sign language game built in collaboration between Google, Georgia Tech, and RIT/NTID.
- Constructed a random level generator with configurable rows and frequencies for convenient internal testing of new features and input systems.
- Build and design games with sign language-centered gameplay to showcase the ASL tracking toolkit.

Bubber Ducky

VGDev

Atlanta, GA

January 2025

- 3D sliding platformer game created by team of 6 in 48 hours for Global Game Jam 2025.
- Created the main player controller and won an honorable mention for best mechanics.
- Utilized rigidbody physics and C# scripting to allow the player to slide around the map and jump at angles normal to the ground surface.

Altarune

VGDev

Atlanta, GA

September 2024 – December 2024

- A top-down action game centered around tower defense and dodge mechanics created in Unity.
- Coded the “slither golem” enemy AI state machine with rigorous transition logic in C# and utilized coroutines to program seamless executions of actions/attacks.

Back to Basics

VGDev

Atlanta, GA

September 2024 – December 2024

- A parry and combo-based action game with rhythm game mechanics.
- Developed the beat indicator in the player HUD/UI with C# in Unity to increase accessibility and visually aid users in successfully timing their inputs.

SKILLS

Programming Languages: C#, C++, TypeScript, JavaScript, Java, Python, HTML, CSS

Frameworks/Libraries: React.js, Next.js, Node.js, Redux, Sanity

Tools: Git, Vercel, Docker, Unity, Unreal Engine, Blender

Methodologies: Agile, Scrum, GRASP, SOLID, Design Patterns, Data Structures & Algorithms
